The easiest, most convenient way to manage your outboard.

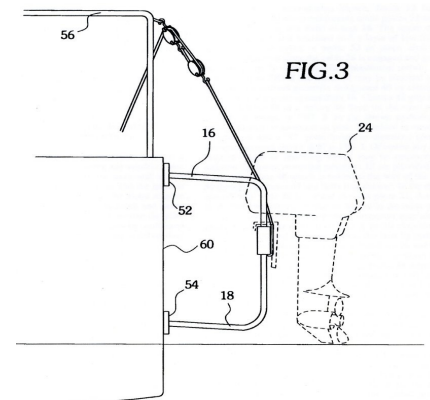

The Mayers Motor Mount™ is a step forward in the evolution of sailing and motor boating. We will work with the best companies to build the Mayers Motor Mount™ under our licensing agreement.

Make your motorboat or sailboat more fun, more useful, more practical and easier to use. Outboard motors have been successfully used as auxiliary power on sailboats and motorboats for many years. With the Mayers Motor Mount™ you can enjoy the benefits of an outboard auxiliary with new ease of use, rugged durability and the added benefit of using the motor mount cage as a swim platform and boarding ladder. It will be easy up and out of the water for your outboard and for you and your guests.

We made the framework sturdy and large enough to allow the motor to be easily lifted well above the sheer of the boat and clear of the water and waves when it is not in use.

The simple construction of the MAYERS MOTOR MOUNT™ and the use of high quality marine grade materials means you don't need any extra cleaning or lubrication supplies for it.
